

Television / Audio Visual

TV & AUDIO

- **Energy Saving Trust Recommended**
- **Powers all TV and Audio Visual equipment ON or OFF automatically**
- **Dedicated Permanent On Socket to power recording devices or similar items with timers. Can be used in conjunction with an extension block.**
- **Provides high quality surge protection for your whole system**
- **Reduces fire risk**
- **British Standards compliant**

Eliminating standby

Eliminating standby in our homes is not always easy. Those little red lights on your television and home entertainment additions such as surround sound amplifiers, DVD Players and computer consoles are needlessly costing you money every hour.

Research suggests that leaving electrical equipment on standby can reduce equipment lifespan by an average of 15% and creates a needless fire risk.

OneClick Technologies have spent several years developing the world's first patented intelligent plug designed to work automatically and boasts a lifespan of at least 15 years.

Tested to British Standards, RoHS compliant and recommended by the Energy Saving Trust, the IntelliPlug's green credentials, integrity and reliability are endorsed by independently qualified technicians.

How Does It Work?

The TVA106 IntelliPlug learns to recognise the signal from your television remote control which enables it to activate your television automatically into standby mode whenever you are ready to use it. When you have finished using your television you switch it off in the normal way using your remote control and the IntelliPlug does the rest!

Sensor learns your remote signal

Say goodbye to standby.

Instead of simply switching off the television, the clever IntelliPlug continues to record the amount of power being drawn by the television and waits until the internal circuitry has completely powered down into a standby state, only then does the IntelliPlug switch the television and peripheral equipment off. Switching the television power off immediately (as if pulling the plug from the mains) can cause corruption of the internal software in some digital televisions. This can result in the television having to go through a re-boot process.

No more standby – no more wasted power.

To date OneClick have sold almost 1 million products and we estimate that together we've saved approximately 50 million kilograms of Carbon Dioxide emissions.
